OBJECTIVES

- ✓ *Project: The ideal city of the future*

Project

Work in groups. Design a poster about the ideal city of the future.

Present your poster to the class. Use these questions as cues for your presentation.

- Where will it be located?
- How big will it be?
- How many people will live in it?
- How will people travel?
- What kind of buildings will people live in?
- Will people use Al technologies? If yes, how will they be used

Gợi ý

Hi everyone,

Now we would like to talk about an ideal city that we would want to live in in the future.

Our ideal city will be built underwater. Why? By then people will have used up all the land on earth, so living in an underwater city would be a great idea to make use of all the resources we have.

The city will be as big as Hanoi, our capital city, so it will be able to accommodate up to about 8 million people. It will also be a commercial and cultural center of the whole nation.

People will also live in high-rise buildings, or 'earth-scrapers' which can be at least 30 stories high.

There will also be a lot of green space and the city will be home to a wide variety of plants and animals. Flowers are grown everywhere, so the city will be very beautiful and colorful. Similarly, roof gardens and green roofs will be very popular in the city.

People will no longer use vehicles that run on fossil fuels, what partly contribute to the pollution of the pollution of the environment. Instead, they will use electric bikes, cars or trams.

This way, the future city will be less polluted and therefore, livable. Pedestrian zones for walking and cycle paths will be available everywhere. People in this city will walk and ride bicycles a lot in order to stay healthy and keep fit.

Will people in this city use smart technologies? Of course, they will. In a century's time, driverless cars will be accessible to all people at affordable prices.

All the cars will be controlled by computers. They will be able to detect and avoid traffic jams. People don't have to drive, so they will able be to do a lot of things while in the cars. For example, they can read books, magazines, watch movies or can even enjoy a nap without having to worry about driving.

All the homes in the city will be smart homes. People can use their voices or just snap their fingers to give commands so that a lot of things will be done automatically.

I guess you all want to live in a place like this, right? Tell us what you think about our ideal city!

Thank you for listening.
